Full-Stack Developer & LLM Behavioral Research | MERN / Next.js | Final-Year CSE, PRMCEAM '27

Experience

Full-Stack Developer Intern

July '26 - Present

AIKart

Amravati, India (In-office)

- Building the frontend architecture and client-side routing (React.js, React Router) for AIKart's Version 1 rebuild - a two-sided marketplace connecting buyers and sellers of AI agents, positioned alongside platforms like agent.ai, Kore.ai, and Hugging Face.
- Translating Figma designs into production React components for core V1 features (Enhanced Agent Profile pages, Category Navigation, seller tools) as part of an 8-9 person engineering team.
- Diagnosed and resolved frontend performance bottlenecks on the live production platform - eliminating scroll/input lag and stabilizing rendering at 60Hz for a user base of 500+ across India and Europe.
- Collaborating via Git/GitHub branching and pull-request workflows to coordinate parallel feature development across the platform rebuild.

Full-Stack Developer Intern

June '26 - Present

Navrasa IT Solutions

Remote

- Built the frontend of **BistroBoard** (formerly EPOS 2.0), a restaurant point-of-sale system, from a bare-bones starter into a full client-facing interface using React, Vite, and TypeScript.
- Designed and implemented role-based access control across 5 user roles (Admin, Manager, Cashier, Chef, User), gating dashboard views and permissions per role.
- Investigated and documented existing codebase architecture, module structure, and hardware/register integration points to support a system rebrand and feature roadmap.

Education

B.E. Computer Science & Engineering

2023 - 2027

Prof. Ram Meghe College of Engineering & Management (PRMCEAM)

Amravati, India CGPA: **8.67** / **10.0**

Research

SimConsistBench – LLM Behavioral Consistency Benchmark

2026

Independent Research [GitHub](#)

- Designing **SimConsistBench**, an open-source benchmark and custom evaluation pipeline (including Identity Retention Rate and Adversarial Resistance Score metrics) to measure how consistently LLM-based agents hold identity and behavior across repeated runs and adversarial multi-turn scenarios - a gap most existing benchmarks don't quantify.
- Early informal testing has surfaced persona-drift and split-response patterns across repeated runs; running formal quantification ahead of a targeted Q3 2026 arXiv submission, alongside a companion causal-reasoning dataset (**Aletheia**) in development.

Projects

MedFlow - Healthcare Workflow Platform

2026

MERN Stack, Role-Based Access Control, CI/CD [Deployment - GitHub](#) [Live Demo](#)

- Built a live clinical triage platform with role-based access control spanning 3 distinct user roles, JWT authentication, and a modular RESTful backend, designed around surfacing decision context directly in the workflow rather than as a separate audit output.
- Built scheduling, approval-workflow, and dashboard-aggregation pipelines to support end-to-end clinical triage operations.
- Manually tested end-to-end workflows with 10+ external users (friends and family) to validate usability and catch edge cases before treating the deployment as stable.
- Set up a CI/CD pipeline for automated deployment; live-deployed on Vercel.

MindMate - Stigma-Focused AI-Companion-to-Therapist Mental Health Platform

2025

React.js, Node.js/Express (DDD), MongoDB Atlas, Multi-Provider AI Abstraction (Groq, Hugging Face) [Deployment - GitHub](#)

- Built a two-tier mental-health platform with WebRTC-powered live calling and an always-on AI companion, providing a structural escalation path to a human therapist via dual-path onboarding, auth, and chat on a Node.js/Express + MongoDB Atlas backend structured with Domain-Driven Design.
- Integrated Hugging Face-based emotion classification directly into the chat flow, driving mood-adaptive responses through a provider-agnostic AI abstraction layer (Groq, swappable to other providers).
- Ran a red-team safety evaluation: manually tested 100+ high-risk prompts against the live chatbot to check for unsafe, inconsistent, or overconfident responses under emotionally charged phrasing.
- Architected the risk-flagging/escalation logic and Daily.co WebRTC live-call integration for the human-therapist tier (in active development).

AgentIQ - AI-Powered Business Solution Platform

2026

Next.js 14, TypeScript, MongoDB, JWT Auth, Google Gemini API [Deployment - GitHub](#) [Live Demo](#)

- Built an AI Business Advisor with a Gemini-powered solution recommendation engine (expected benefits, tech stack, ROI, implementation difficulty) and full JWT-authenticated CRUD agent management (create, edit, delete, search, filter, sort) on MongoDB/Mongoose.
- Built a responsive, dark-themed SaaS interface with toast notifications and loading states for a production-grade feel.

Technical Skills

- Languages:** JavaScript, Python, TypeScript, Java
- Frontend:** React.js, Next.js, React Router, Vite, Tailwind CSS
- Backend:** Node.js, Express.js, REST APIs, JWT Auth, MongoDB, Mongoose
- Tools & Platforms:** Git, GitHub, Vercel, Postman, CI/CD, Figma
- Other:** REST APIs, RBAC, JWT Authentication, LLM/AI API Integration (Google Gemini), Prompt Engineering
